Projects

Sentiment Analysis

Sentiment analysis is a **natural language processing (NLP) technique** used to identify, extract, and classify emotions or opinions expressed in text. It determines whether the sentiment of a piece of text—such as a review, comment, or social media post—is **positive, negative, or neutral**.

Food Map – Food delivery web application

Food Map is a **food delivery web application** that allows users to browse restaurants, explore menus, place online orders, and get food delivered to their doorstep quickly and conveniently. It connects customers with local eateries, offering features like real-time tracking, secure payments, and personalized recommendations.

Flapping Bird

The **Flapping Bird project** is a simple interactive game where a bird moves forward and the player controls its flight by making it flap to avoid obstacles. It demonstrates basic concepts of **game development, physics, and user interaction**.
